## SUMMARY

Computer Science student at the **University of Engineering and Management, Kolkata**, with practical experience in web development and academic projects. Skilled in **HTML, CSS, C, SQL**, and **Data Structures**, with hands-on work on systems like Health Informatics and AI-based applications. Currently completing a research internship, focusing on building functional and user-oriented solutions. Seeking opportunities to apply technical skills, gain industry experience, and grow as a **software engineer**.

| <ul style="list-style-type: none"><li>• <b>Developed a multi-page Health Informatics System</b> using HTML, CSS, and Vanilla JavaScript to streamline patient biometrics and medical analysis data.</li><li>• <b>Engineered an interactive front-end</b> featuring secure login validation, a real-time BMI/BMR health calculator, and a dynamic 6-column medical dashboard with local page routing</li></ul> |                              |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                    |                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <b>Health Informatics System  </b><br>• <i>Health Informatics combines healthcare with information technology to manage and analyze medical data efficiently. With the increasing demand for digital healthcare solutions, web-based health informatics systems play a crucial role in improving access to health information and assisting users with basic medical guidance.</i> | 12/2025 – Present |
| <b>Ai-biling system  </b> 📄<br>• <i>An <b>AI Billing System</b> is a smart software that automatically generates bills, calculates totals, applies discounts/taxes, and can even suggest insights</i>                                                                                                                                                                              | 11/2025 – 12/2025 |
| <b>hostel Allocation system  </b><br>• <i>A <b>Hostel Allocation System</b> is a software that automatically assigns rooms to students based on availability, preferences, and rules—reducing manual work and avoiding conflicts.</i>                                                                                                                                              | 11/2025 – 12/2025 |
| <b>Timetable Scheduler  </b><br>• <i><b>Time Table Scheduler</b> is a system that automatically creates schedules (classes, exams, or tasks) without conflicts using rules or algorithms</i>                                                                                                                                                                                       | 11/2025 – 12/2025 |
| <b>telephone Biling system  </b><br>• <i>A <b>Telephone Billing System</b> is a software that calculates call charges based on duration, type of call (local, STD, ISD), and generates a final bill for the customer.</i>                                                                                                                                                          | 11/2025 – 12/2025 |
| <b>Distance Measurement System by Aurdino  </b> 📄<br>• <i>A distance measurement system using Arduino typically uses an ultrasonic sensor like the HC-SR04 Ultrasonic Sensor to measure the distance of an object by sending sound waves and calculating the time taken for the echo to return.</i>                                                                                | 2024 – 11/2024    |
| <b>Object Avoiding Car using Arduino  </b><br>• <i>An <b>object avoiding car</b> is a smart robot that detects obstacles using an ultrasonic sensor and automatically changes direction to avoid collision.</i>                                                                                                                                                                    | 2025 – 02/2025    |
| <b>Sound Detection by Aurdino  </b><br>• <i>A <b>sound detection system using Arduino</b> detects sound (like claps, noise, or voice) using a microphone sensor and performs actions like turning ON an LED or buzzer.</i>                                                                                                                                                         | 03/2025 – 04/2025 |

## SKILLS

|                                                              |                                         |
|--------------------------------------------------------------|-----------------------------------------|
| <b>Programming Languages :</b><br>C , SQL , HTML , CSS , DSA | <b>Databases &amp; Cloud :</b><br>MySQL |
|--------------------------------------------------------------|-----------------------------------------|

## CERTIFICATES

|                                                     |                                                                                    |                                                                |
